## UNIGUARD PRODUCT RANGE

### ROBUST RECORDERS

These units are built from machined stainless steel and have a cushioning handle. As is our company's tradition, they are very rugged, can withstand well over 100g of shock and are totally watertight.

The robust recorder can hold over 4,000 events in its in-built memory.

Available also in the new Supervisor model, which can have data uploaded from standard recorders and hold over 16,000 events.

### VALUMATE 2 RECORDER

The ValuMate2 recorder is a light-weight yet hardy data logger. It is housed in an aluminium, waterproof and shock resistant case. The ValuMate2 Patrol Recorder is capable of recording 4000 separate patrol events.

### POINT VISIT TAGS

An inexpensive tamper proof point data generator to hold information for the recorders. They have a lifetime of over 100 years.

### DOWNLOADER / ENCODER SET

The downloader downloads data from UniGuard recorders into your computer. Encoder reads tag serial numbers to facilitate recognition of allocated number.

### UNIGUARD SOFTWARE

By far proven to be the most versatile and effective package available to date. UNIGUARD software is user friendly, has built in tutorials and loads onto Windows 98SE or later. UniGuard supports multi format reporting including exception reports, and is able to group multiple site groups into a region. UniGuard can e-mail downloaded data from a report site to a head office computer and is multi-user enabled with individual passwords.
