## VALUMATE2 RECORDER

ValuTronics has been a lead provider in performance management and attendance verification systems for the past 20 years. The UniGuard line of products has been employed by all the major Centre Management and cleaning companies over the years and we are still growing.

Our mission is to supply our happy customers with ever improving attendance monitoring software and hardware. We specialize in supplying verification reporting systems to companies that need to have an undisputable record of movements of their employees at any given time.

Using micro-chip technology, the UniGuard systems are able to track employee movements over the course of their shift, and even assign them a pre-determined patrol route through the use of an electronic baton with internal memory and a series of tags which hold information and can be securely mounted in strategic places in the patrol area.

The ValuMate2 Patrol Recorder is a light-weight yet hardy data logger. It is housed in an aluminium, waterproof and shock resistant case to ensure performance in adverse and robust conditions. The ValuMate2 Patrol Recorder is capable of recording 4000 separate patrol events. Installation is quick and simple as no wiring is required between patrol points.

As with all our products, the ValuMate2 recorders have built-in shields to resist microwave attack and are compatible with UniGuard 9 software and above. ValuMate2 includes the ability to download into the UniGuard Supervisor Recorder data caddy.

ValuMate2 is also available in higher data capacity versions of up to 16,000 hits, and comes with a 3 month warranty.
